

MEETING REPORT

WEEK 5

Team Name: Undergraduate Lab Portal

Date of Meeting: 04/03/2026

Start Time: 11 AM

End Time: 12 AM

Meeting Location: Epoka Univesity

Moderator: Sibora Kociu

Recorder: Redi Cuka

Other Members Present: Nikol Isaku, Arbiana Muka, Megi Sollaku, Arlind Disha, Arli Asllani

Members Absent: -

Topics Discussed:

This week, we focused on refining the system design by improving the sequence and activity diagrams to better represent the flow of functionalities. We also began developing initial ideas for state diagrams to capture the behavior of key system functionalities. In addition, we worked on outlining the general structure of the database, including drafting the main concepts for the database design and creating an initial ERD schema.

Progress Report

1. **Sibora Kociu + Redi Cuka:**

This week, they focused on refining the sequence and activity diagrams for the Professor user role to better represent system workflows. They also began developing initial ideas for state diagrams related to key functionalities within this role. Additionally, they contributed to outlining the general database structure .

2. **Arlind Disha + Arli Asllani:**

This week, they worked on improving the sequence and activity diagrams for the Admin user role, ensuring they accurately reflect the system processes. They also started forming concepts for state diagrams to describe the behavior of core functionalities. In parallel, they contributed to defining the overall database idea and the initial ERD schema.

3. **Nikol Isaku + Arbiana Muka + Megi Sollaku:**

This week, they focused on refining the sequence and activity diagrams for the Student and External Programs & Partnerships Office roles to better illustrate system interactions.

Conclusion:

During this week, the team focused on advancing the system design by refining sequence and activity diagrams and initiating the development of state diagrams for key functionalities. Additionally, the groundwork for the database was established through defining the general structure and creating an initial ERD schema. These efforts contributed to making the system design more structured, consistent, and aligned with the intended implementation.
