

MEETING REPORT

WEEK 6

Team Name: Undergraduate Lab Portal

Date of Meeting: 04/04/2026

Start Time: 11 AM

End Time: 12 AM

Meeting Location: Epoka Univesity

Moderator: Sibora Kociu

Recorder: Redi Cuka

Other Members Present: Nikol Isaku, Arbiana Muka, Megi Sollaku, Arlind Disha, Arli Asllani

Members Absent: -

Topics Discussed:

This week, we focused on developing the core structure of the system by creating the initial codebase and structuring the database. We selected **PostgreSQL** as the database management system, **Python** for the back-end development, and **TypeScript** for the front-end implementation. Additionally, we completed the **class diagrams** based on the database structure we designed, ensuring consistency between the system architecture and implementation.

Progress Report

1. Sibora Kociu + Other Members:

This week, they focused on developing the **front-end structure** of the system using **TypeScript**. Their work included organizing the user interface components and establishing the foundation for the client-side implementation to support system functionalities.

2. Arlind Disha + Arli Asllani + Redi Cuka:

This week, they focused on the **back-end development** of the system using **Python**. Their tasks included creating the core system logic, structuring the server-side architecture, and contributing to database integration with **PostgreSQL**.

Conclusion

During this week, the team focused on establishing the technical foundation of the project through code development and database structuring. The system architecture was supported by the use of **PostgreSQL** for database management, **Python** for the back end, and **TypeScript** for the front end. In addition, the team successfully completed the **class diagrams** based on the created database design, helping ensure a more structured and implementation-ready system. These efforts contributed significantly to progressing the project from design toward development.
